Hyperplex™ Phosphoprotein Profiling

- 1,250-plex Cell Signaling Analysis
- Phosphorylated/un-phosphorylated Proteins
- Target Engagement & Drug Efficacy
- Drug Repurposing & Repositioning
- Design of Combination Therapies

#Hyperplex™ Cell Signaling Analysis

Sensitivity: The Power of Targeted Phospho-Proteomics.

Cell signaling analysis has become a key factor in understanding disease mechanisms and modulation. Unlike shotgun proteomics, Hyperplex™ allows highly sensitive, targeted quantification of un/phosphorylated proteins along various signaling pathways from minimal sample.

MAPK
Signaling

Relevance: Expert-curated Biomarkers and Signaling Pathways.

Hyperplex™ Protein Profiling is a targeted approach. The new 1,250-plex assay menu covers the most relevant 10% of the proteome including PTM. Hyperplex™ allows to select markers based on 20 years of peer-reviewed biomarker discovery.

And yes, custom antibodies can be added to any panel!

Compound
Benchmarking [1]

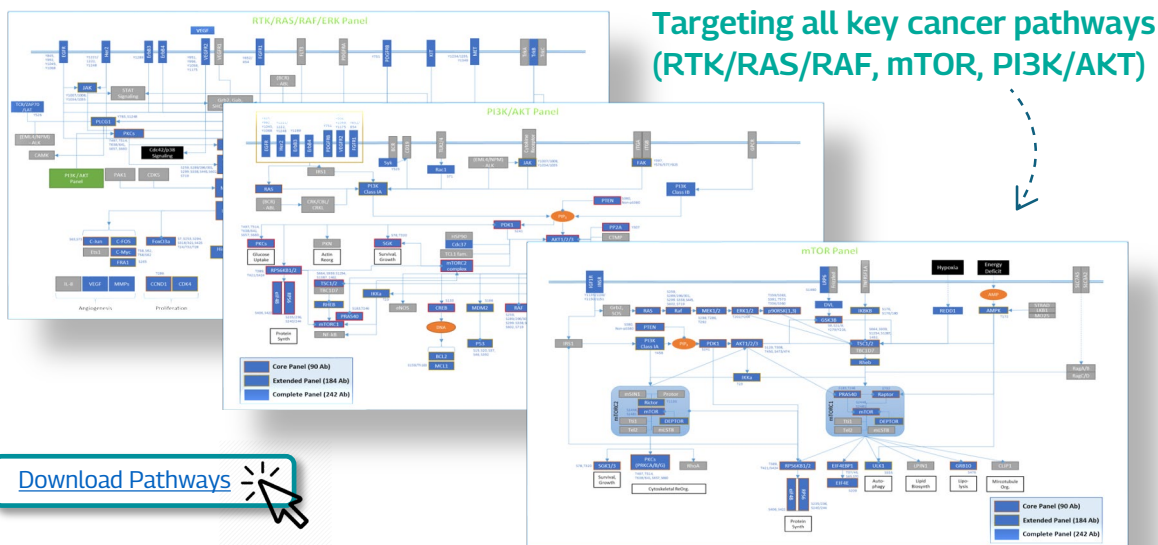

Gefitinib®/Iressa® are brands of AstraZeneca. Erlotinib®/Tarceva are brands of Roche/Genentech. Sorafenib®/Nexavar® are brands of Bayer AG.

[1]: Mitsos et al. <https://doi.org/10.1371/journal.pcbi.1000591>

#Benefits

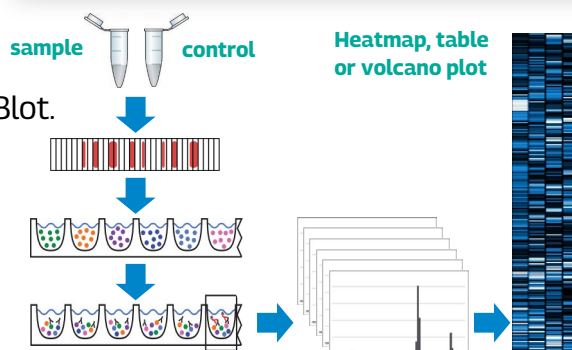

How can Hyperplex™ Protein Profiling accelerate your research?

- Sensitivity: Hyperplex™ is by far the most sensitive platform on the market.
- Coverage: Hyperplex™ enables the most comprehensive pathway profiling.
- Compatibility: Combine Hyperplex™ PTM analysis with soluble protein profiling (e.g. Olink®).

#Technology

- Electrophoresis-enhanced Western Blot.
- Proteins are barcoded.
- Up to 1,250 antibodies per sample.
- FACS readout, CV < 9%.
- Publication: [Treindl et al, 2016](#)

#Sample Types

- PBMC, cell culture, 2D/3D cells, organoids, sorted cells
- Biopsies, tissue sections, PDX
- Sample requirements: 15-40 µg of total protein

#Case Studies

#1: Combination Therapy

Bayer used Hyperplex™ to investigate synergies of a Regorafenib+Sorafenib combination therapy (Disease: hepatocellular carcinoma).

Samples: Biopsies from PDX mouse models (Publication: [Kissel et al., 2017](#))

#2: Translational Oncology

Phase 1 study on tumor samples (ovarian cancer) comparing responders vs. non responders identifies EZH2 as translational biomarker. (Publication: [Naskou et al., 2020](#))

#3: Biomarker Discovery

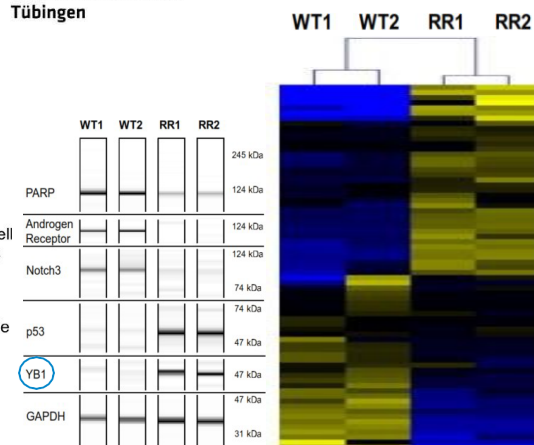

Hyperplex™ was used for the discovery of clinically relevant markers of radio-resistance. (Publication: [Inder et al., 2019](#))

#Assay Configurator: Customize your panel

Cell Signaling Research: Just have it your way!

- Quantify up to 12,50 proteins per sample.
- Profile 50+ signaling pathways in one go
- Customizable for every project
- Freedom to add custom antibodies

The mTOR pathway panel - one of 50 validated panels

#How to order?

Cell Signaling: Accelerate your research with just a few clicks!

- Download the assay configurator here
- Select one or more species
- Select pathway activity panels
- Select druggable pathways
- Save the file and e-mail to hello@assay-engineers.com
- Get your cost estimate within 2 days.
